

BUBBLEBAGDUDE CARE AND CLEANING

1. Always rinse the bags thoroughly with cold water immediately after use. Do not use warm or hot water, as this will clog the screens. (For the Bubble Machine, use the same method)
2. Repeat as necessary.
3. Hang the bags and always allow them to air-dry completely before storing them to prevent mold or rot issues.

* Never put bags in the washing machine.

* Never use detergent or any solvents.

* If your screens become clogged you can use 99% isopropyl alcohol on a soft toothbrush to gently remove tough stains. Keep alcohol away from the edge of the screen. (Stiching)

RECOMMENDED DRY WEIGHT PLANT MATERIALS

1 GALLON BAGS : Up to 2 oz / 60 grams

5 GALLON BAGS : Up to ½ pounds / 225 grams

20 GALLON BAGS : Up to 2 pounds / 1 kg

32 GALLON BAGS : Up to 3 pounds / 1.3kg

RECOMMENDED DRY WEIGHT PLANT MATERIALS

220 µ ----- Blue ----- Workbag

190 µ ----- Green ----- Clean-up Bag

160 µ ----- Red ----- Food Grade

120 µ ----- Orange ----- Great Quality

90 µ ----- Black ----- Incredible quality TOP

73 µ ----- Yellow ----- Prime quality TOP

45 µ ----- White ----- High Quality

25 µ ----- Purple ----- High Quality

WHAT YOU'LL NEED :

- BUBBLEBAGDUDE bag kit including pressing the screen
- 1- gallon or 5-gallon bucket, 20-gallon or 32-gallon garbage can
- Coldwater and ice
- A towel
- Plant material

* Mixing options: a spoon hand mixer or BUBBLEBAGDUDE bubble machine with BUBBLEBAGDUDE bags

Important :

If you are using an electric mixing device, we recommend mixing in a separate bucket before pouring the mixture into your BUBBLEBAGDUDE bags. Please refer to the bag care instructions at the back.

THE PROCESS

The Worlds' Famous BUBBLEBAGDUDE SYSTEM offers 8 layers of industrial-grade filtration, which allow you to extract the essential oils from almost any plant.

Line the bucket with your BUBBLEBAGDUDE bags starting with 25-micron bag and ending with a 220-Micron bag. (Start with smaller micron which is 25-micron and ending with the largest bag which is 220 micron)

OPTION 1 (Mixing by hand)

01.

Fill the bucket with enough cold water to cover the bottom of the BUBBLEBAGDUDE bags (about halfway full)

02.

Add your dry or frozen plant trimmings.

03.

Add enough ice to almost fill your bucket to the top

04.

Stir your mix for 15 to 20 minutes, adding ice if necessary to keep the water cold. (50/50 mix of ice and water is ideal)

When the BUBBLEBAGDUDE bubble machine has finished mixing, there is no need for settling to occur. Using the drain hose, drain the water into your BUBBLEBAGDUDE bags which you prepared in step #1. Do not throw away the leaf mixture. You should run it at least 3 separate times. Add fresh water and ice as needed.

Gently squeeze any remaining water out of the BUBBLEBAGDUDE Bubble Machine. Rinse down the inside of the bag to make sure no plant extracts are stuck to the inside. Drain the rinse water into your BUBBLEBAGDUDE bags. If any of the bags are draining slow, take one hand and wrap around the top of the bag then jerk it up and down. The bag will start to drain better.

PULLING THE BAGS

Now you're ready to begin collecting your herbal extract. pull out 220 Micron bags and allow the water to drain into the remaining balance. Discard the content of this bag as the 220 Micron bag is used only to catch contaminants.

The remaining bags contain various grades of extract. Pull out each bag one by one, draining them back into the bucket.

As you pull each bag, turn it inside out and stretch it over a bowl. Scrape your herbal extracts off with a spoon or plastic card.

Place your extract onto a pressing screen. Fold a clean, dry towel in half with the screen in the middle. Gently press out the moisture.
